

WHAT IS AN IRONWORKER?

STRUCTURAL STEEL • FABRICATION

Ironworkers, as individuals, are people who work hard in the structural steel industry always taking us to new heights in high rise and architectural ways.

Ironworker, as a machine, is what fabricators, manufacturers and structural steel workers use because it offers multiple functions saving time and money. ACC Machinery Co., Inc. offers a wide variety of makes & models to choose from, as well as options and tooling.

Call: 602-258-7330, [email](#) or [visit our showroom](#).

Our 55+ years of FULL-SERVICE experience offers value added to your equipment goals.

Below are some applications that most ironworkers may perform providing the right options.

- Shearing, punching, notching, and bending metal plates, bars, and sections to create finished products or sub-assemblies
- Preparing structural elements, reinforcing bars, and other metal components used for construction of buildings, bridges, and infrastructure projects
- Cutting intricate designs, punching decorative holes, and shaping metal profiles to bring artistic visions to life

Let's discuss your capacity & budget needs. Our focus is to support your ongoing productivity!
